

GAME MANUAL

INTRO

Hello space explorers. Welcome to GALAXYMANIA, the newest chain in space exploration. We've got a special piece of cargo that needs delivering today, and need your help to make it happen.

SETUP

GALAXYMANIA is designed to be played in two homes simultaneously, with communication taking place over a video chatting platform like Zoom. One player will be the ASTRONAUT and pilot the spaceship, while the other is MISSION CONTROL and will operate the robot. Each of the players has to open the appropriate console and download the appropriate mission packet PDF.

ASTRONAUT CONSOLE: <https://scratch.mit.edu/projects/378974026/>

MISSION CONTROL CONSOLE: <https://scratch.mit.edu/projects/386656559/>

The consoles were made using a free program called Scratch. Once you've finished your mission, feel free to explore how the console was built and try making a game of your own!

If possible, the mission packet should be printed out. However, if you do not have access to a printer, you can pull up the mission packet on your computer and use a piece of scratch paper to solve the puzzles.
